Treated Pine Decking

Tarmac treated pine decking is graded for appearance, strength and is treated for above ground applications only.

Maintainence

Prior to installation all Tarmac treated decking must be oiled on all sides for protection against bleaching, surface moulds, stains, cracking and dimensional movement.

Always follow the paint manufacturer's instructions for application and maintenance of the coating.

Installation

Before you begin consult with your local council and state building codes to obtain approval.

Timber is a natural product that can be affected by its surrounding environment. It will absorb and release moisture depending on the conditions of the weather and the proximity to the ground. Tarmac recommends that the site where the deck is to be installed be assessed for any possible drainage and ventilation problems. These should be rectified prior to construction.

Use hot dipped galvanised and or stainless steel fixings only, electroplated fasteners are not recommended.

All treated timber should be treated in it's final shape and form to avoid decay and insect attack. When cutting, notching, or drilling must be carried out to treated timber, the area of timber revealed must be liberally resealed with TANALISED® Ecoseal for above ground use to maintain the integrity of the preservation protection.

Treatment

H3 LOSP (Clear / Green in colour)
or
H3 Ecowood Tinted (Long lasting red-brown in colour)

Note: The above treatment options are all non-CCA alternatives.

Sizes (mm)	90 × 22 and 70 × 22
